SKILLS

- python
- java
- django
- Machine Learning
- Web Development
- MySQL
- Mango DB

LANGUAGES KNOWN

English (Both)
Tamil (Both)

CERTIFICATIONS

- Python Programming (Python for Everybody)
- Python

TEST RANKS

- JEE Mains : 23000

PROJECTS

Synexis | October 2025 - December 2025

- The project Synexis aims to develop a unified Machine Learning Dashboard that allows users to access and run multiple ML models from a single platform. Instead of using separate applications for different prediction tasks, users can simply choose the desired function—such as leaf classification, disease detection, or house price prediction—and the system automatically loads and executes the corresponding trained model stored as a pickle file. This centralized approach simplifies user interaction, improves efficiency, and eliminates the need to manage multiple standalone applications.

Built with React (Vite) for the frontend and Django for the backend, Synexis offers a clean, fast, and interactive interface combined with a powerful server-side framework. The dashboard enables smooth communication between the UI and backend, ensuring real-time predictions and quick responses. Its modular design also makes it highly scalable, allowing developers to easily integrate ne

Automated project Deployment Dashboard | April 2025 - October 2025

- This project is designed to help students easily deploy and showcase their projects online through a fully automated process using GitHub,Kubernetes, and Argo CD. Whenever a student pushes code to their GitHub repository, the platform automatically pulls the latest changes and deploys them to a Kubernetes cluster. This seamless integration eliminates the need for manual setup, reduces deployment errors, and ensures that applications are always up to date and consistent.

By implementing **Continuous Integration and Continuous Deployment (CI/CD)** practices, the platform allows every update to be built, tested, and deployed automatically. This makes project delivery faster, more reliable, and efficient. Moreover, students gain valuable hands-on experience with real-world DevOps tools and cloud-native workflows, preparing them for industry environments. Overall, this system simplifies project deployment, enhances productivity,helps students present their works

ACHIEVEMENTS

- All rounder, Top 10 in class in school
